

BlockApps

Solution Architect/Tech Lead

Company Overview

BlockApps is an enterprise blockchain company that develops industry applications on our own blockchain platform, STRATO, to enable traceability across enterprise value chains. Our customers include Fortune 500 companies such as Bayer Crop Science (the world's largest seed company), Blockchain for Energy (a consortium of the world's largest energy companies including Repsol, Chevron, ExxonMobil, Schlumberger and more), and the U.S. government. BlockApps has launched several industry initiatives, including TraceHarvest (agribusiness traceability), TraceCarbon (sustainability tracking), and the Enterprise Ethereum Alliance (world's largest open standards blockchain organization). For more information, visit and contact us at www.blockapps.net, or find us on social media via [LinkedIn](#), [YouTube](#) and [Twitter](#).

Job Description

If you are passionate about the enterprise blockchain space and are interested in helping customers implement cutting-edge, scalable and performant blockchain solutions, we would love to hear from you.

Proven customer delivery experience and hands-on coding ability is a must as well as excellent communication skills. We are happy to train you on blockchain technologies on the job.

Roles & Responsibilities

- Work with cross-functional teams to coordinate and manage the development and delivery of large-scale enterprise blockchain projects, based on our STRATO platform
- Serve as the point of contact to customers and drive discussions with business and technical stakeholders around business requirements, solution architecture, project updates etc.
- Deliver the architectural design for blockchain applications, translating business needs into an end-to-end technical solution
- Manage day-to-day operations of technical delivery teams, ensuring quality and on time delivery of customer projects
- Provide technical guidance and mentorship to application development teams, and participate in the code review process
- Create and manage project documentation such as project plans, functional specifications, technical specifications, progress reports
- Prioritize, manage, and effectively communicate across multiple, fast paced initiatives
- Hands-on enterprise application development in JavaScript, React, Node, SQL
- Rapid prototyping of demos for customers
- Support technical pre-sales efforts

Trust in Collaboration

BlockApps
