The Challenge

Buyers are **demanding
greater visibility** into
purchases of all types

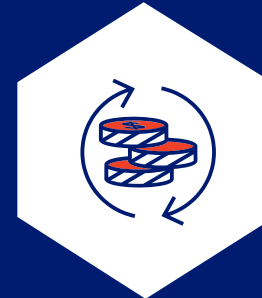

Poor Access to Key Product Data

- Data supporting product claims is siloed and untrustworthy
- No benefit to sellers from better practices

No Market Infrastructure

- Few automated markets for more complex transactions
- Transactions are complex and risky
- Costs are high due to intermediaries

Low Liquidity

- Most of the world's value is illiquid
- High settlement cost and time suppresses asset value

02
—

The Solution

Tokenize assets on
STRATO giving buyers
key data to improve
trade

Secure Access to Key Product Data

- Data supporting claims is security verified at the source and present at time of purchase
- Sellers benefit from better practices due to greater transparency

Market Infrastructure

Market infrastructure on STRATO

- *streamlines* the transaction process
- *increases* trust
- *lowers* costs
- *reduces* risk

Liquidity

- New market infrastructure brings liquidity to previously illiquid markets
- Increases asset value and ability to fairly compensate value chain

BlockApps STRATO Blockchain Architecture

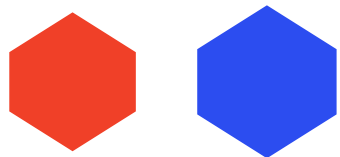

The STRATO Network powers industry applications and programmable member networks all accessible via web apps, mobile apps, and command line interfaces.

Key Use
Cases

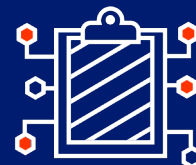

Industry
Applications

STRATO
Network

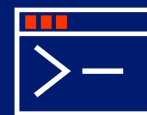

STRATO Network

Ethereum Smart Contracts

Ethereum Virtual Machine, Solid VM-based smart contracts

**REST API and
Middleware – Enterprise
IT Integrations**

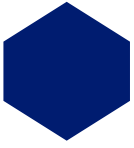

REST APIs, connectors to many existing databases and applications

**STRATO Enterprise
Blockchain**

Messaging protocol for creating standardized network communication

Industry Applications

TraceHarvest

Track and trace
the full lifecycle
of products

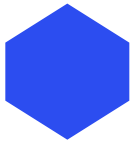

TraceCarbon

Harmonize your
emissions data

NetworkGov

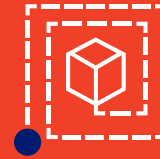

Provide compliance
and operational
efficiency

Key Use Cases

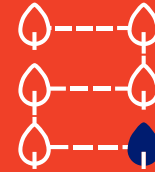

Value Chain Traceability

Securely share key data across the entire value chain for the full lifecycle of products / assets

Sustainability Tracking

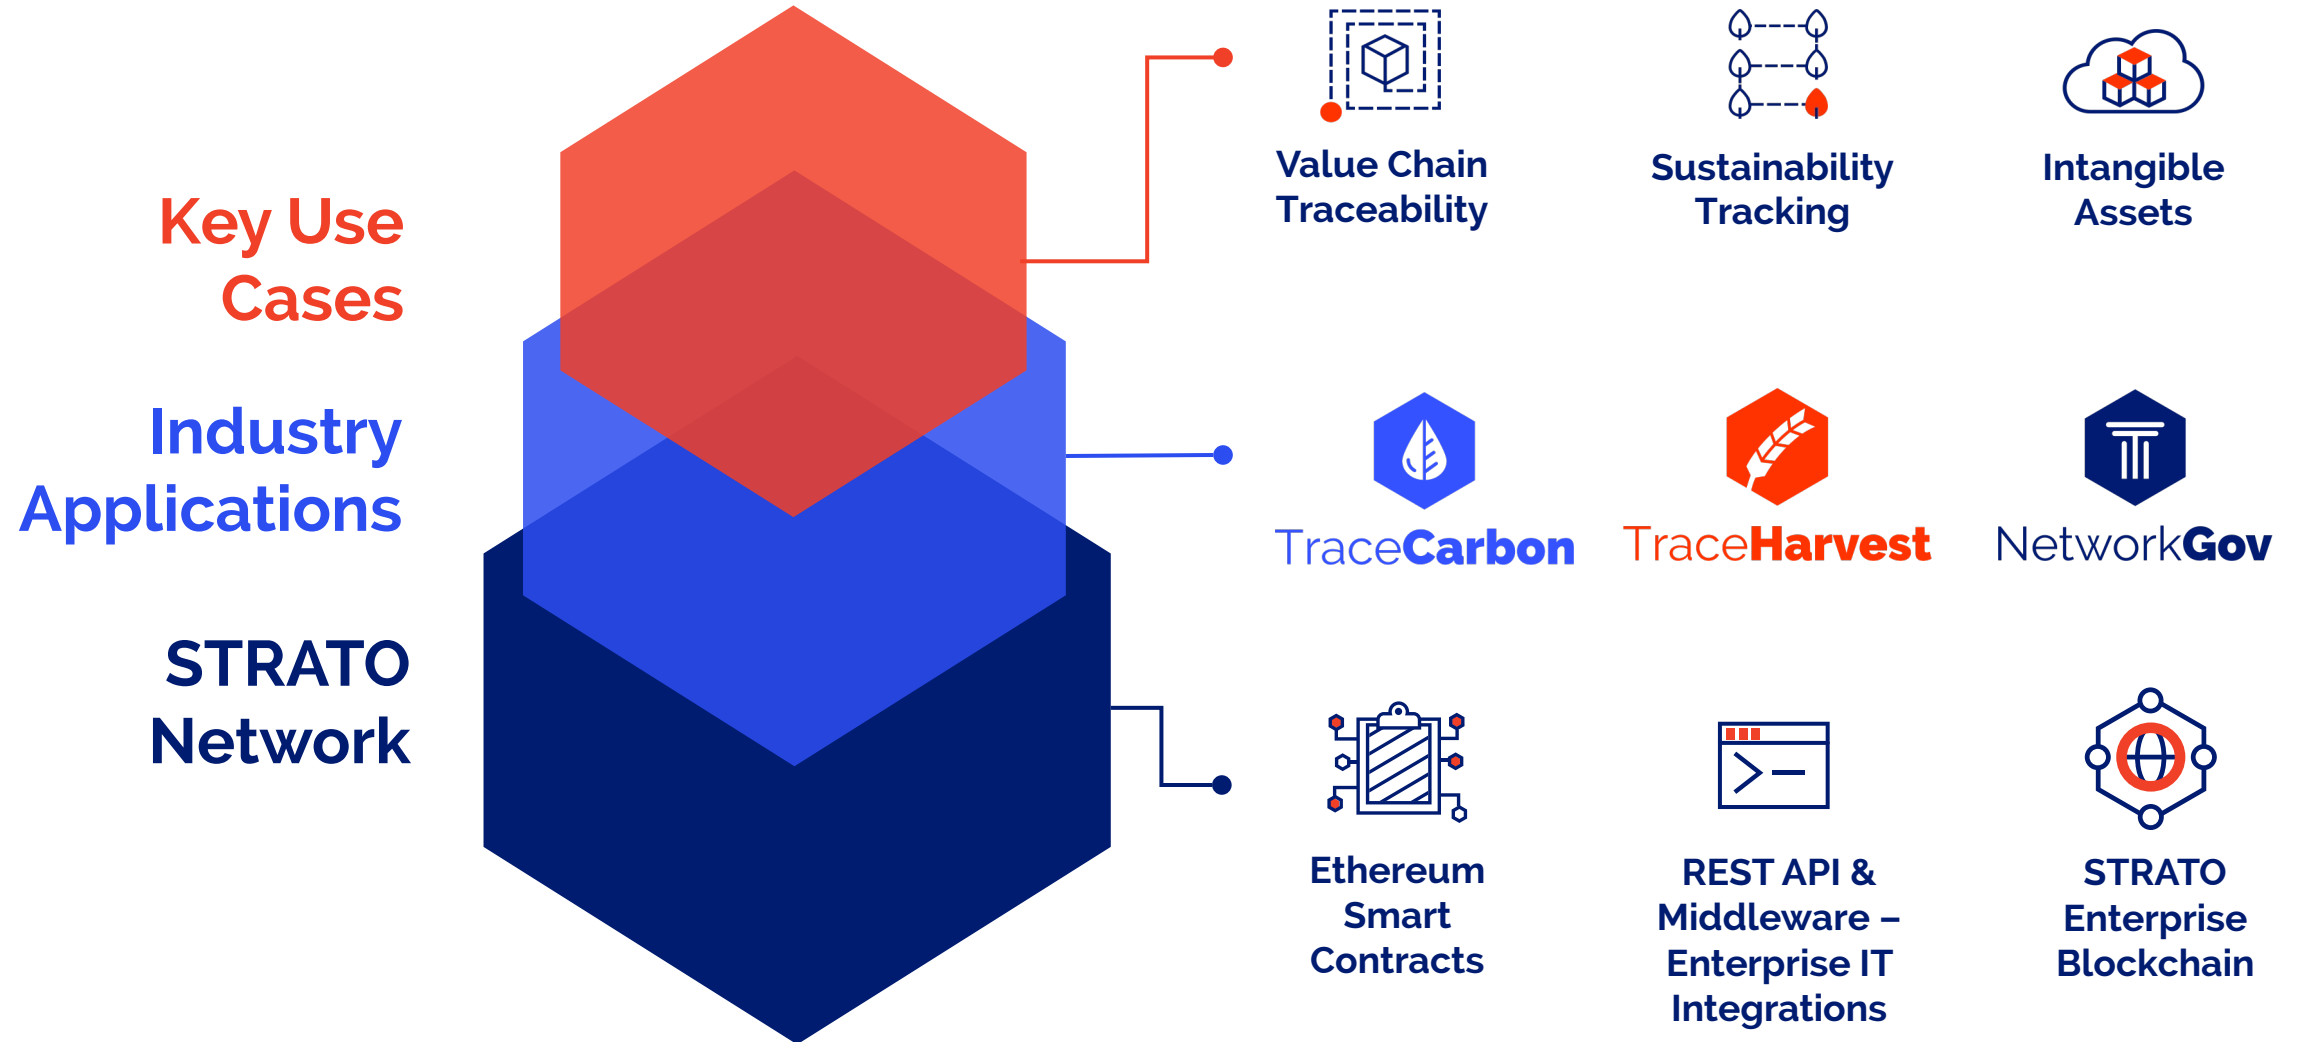

Automate sustainability data collection and tokenize emission and offsets for assignment and exchange

Intangible Assets

Bring trade efficiency and trust to previously non-transparent markets

Tokenizing **Real-World Assets** and Adding Value

**Exchange /
Trade Assets**

**Tokenize Real-
World Assets**

Real World Asset Framework

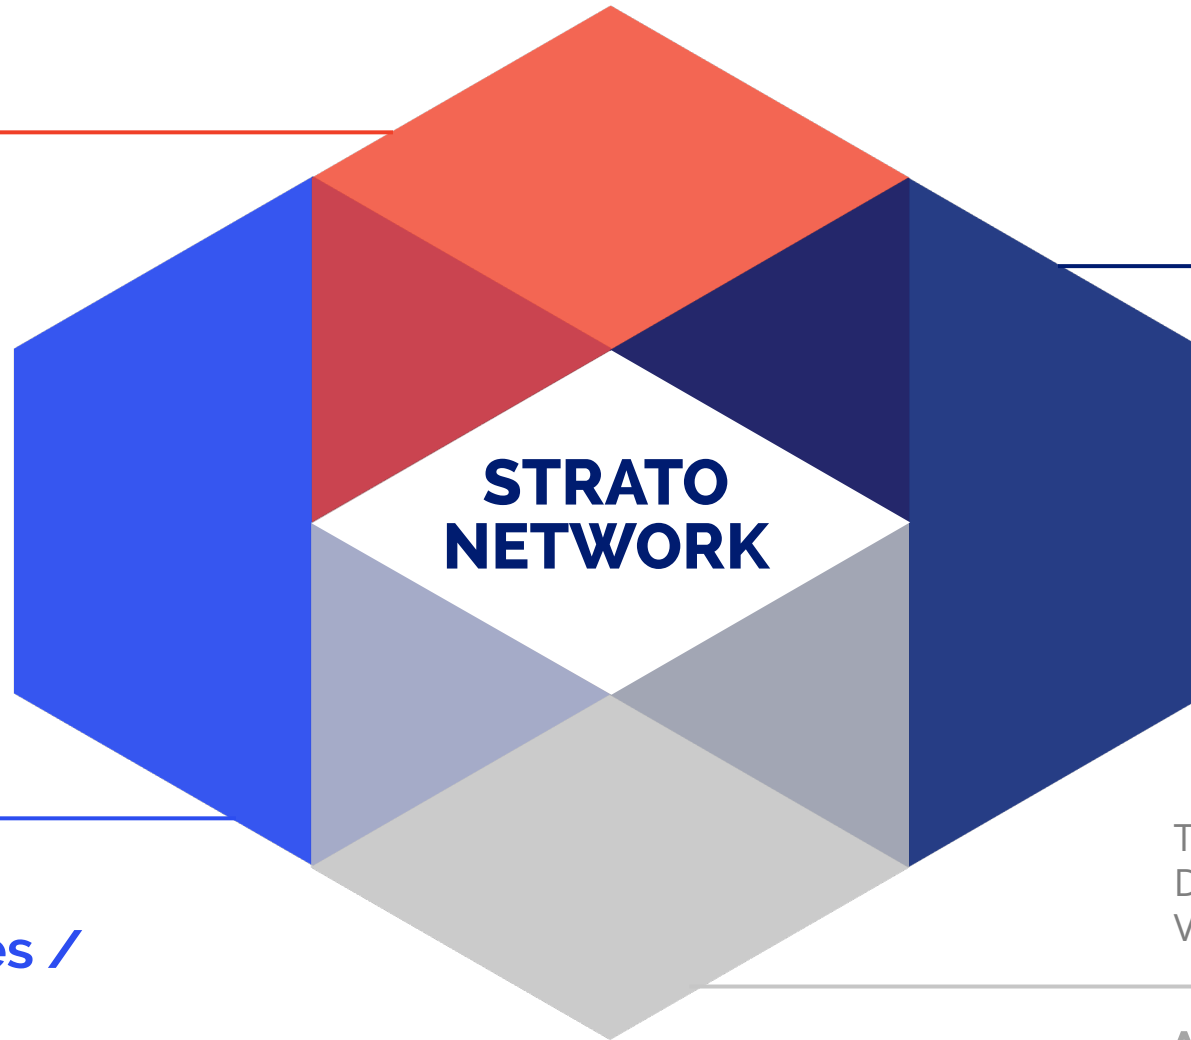

Transaction Components
(Ownership Transfer, Unique
Identifiers, Physical Location,
etc)

Incentive
Components
(Participation
Offers,
Calculation, etc)

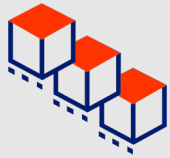

**Create Value
Chain Incentives /
Residuals**

Transparency Components (Product
Details, Events, Certifications /
Verification, etc)

**Add Value with
Transparency Data**

STRATO Network Advantages

Trusted Unique Tokenized Real-World Asset

Blockchain assures buyers that each real-world asset is tokenized individually, attaching data as it exchanges hands

Verified Identities

Users must go through an identity verification process in order to write data or engage in commerce on the network

Future Proof Against Changing Standards

Data you can trust maintains in value in perpetuity even as standards converge and evolve

STRATO Network Advantages

Proven Low-Carbon Enterprise Blockchain

BlockApps STRATO blockchain has been proven with production workloads with low-energy consumption

Data Privacy and Security

Participant data remains private to only the relevant parties and is never shared with competitors

Incentivize the Entire Value Chain Dynamically

Customize incentives for all participants to accelerate program adoption
